Jo dikhta hai, wo bikta nai

* **Sass** → writing CSS with some superpowers.
Scss

* **Styled Components** → commonly used with React.

* material UI, chakra UI, bootstrap.

- -

Jailwind CSS

↗ very lightweight

↳ latest framework, trending in frontend community.

This framework works with many different frameworks we will use parcel.

tailwind css/ postess : tool for transforming css with javascript

Tailwind css has built in classes which you can use to easily modify css

- flex

- justify between

- m-10 , p-10 → padding, margin

- w-10 → width

- padding on x axis (left, right) = px.

hard coded size values

↳ put size inside [ ]

w- [200px]

Tailwind is light weight.

- parcel only imports css, which is absolutely present in your app. minimum css

- major advantage , very lightweight.

- imports a class, only once.

Dark mode

important

in the same class keep writing dask : _____
